** Holdings information as of 31 July 2011.

As at 31 July 2011

SEI Strategic Portfolios

Diversification at every level

Important Information

The SEI Strategic Portfolios are a series of the SEI Funds and may invest in a combination of other SEI and Third-Party Funds as well as in additional manager pools based on asset classes. These manager pools are pools of assets from the respective Strategic Portfolio separately managed by Portfolio Managers which are monitored by SEI. One cannot directly invest in these manager pools.

Investment in the range of SEI's Funds is intended as a long-term investment. The value of an investment and any income from it can go down as well as up. Investors may not get back the original amount invested. If the investment is withdrawn in the early years it may not return the full amount invested. Additionally, this investment may not be suitable for everyone. If you should have any doubt whether it is suitable for you, you should obtain expert advice.

No offer of any security is made hereby. Recipients of this information who intend to apply for shares in any SEI Fund are reminded that any such application may be made solely on the basis of the information contained in the Prospectus. This material represents an assessment of the market environment at a specific point in time and is not intended to be a forecast of future events, or a guarantee of future results. This information should not be relied upon by the reader as research or investment advice regarding the funds or any stock in particular, nor

should it be construed as a recommendation to purchase or sell a security, including futures contracts.

The investment risks described below are not exhaustive and potential investors should carefully review the Prospectus prior to investing. The risks described below may apply to the underlying assets of the products into which they invest.

- *Investment in equity securities in general are subject to market risks that may cause their prices to fluctuate over time.*
- *Fixed income securities are subject to credit risk and may also be subject to price volatility and may be sensitive to interest rate fluctuations.*
- *Property assets may be difficult to buy or sell and the impact of this may be that the cash remains uninvested or property is disposed at an unfavourable price.*
- *Absolute return investments utilise aggressive investment techniques which may increase the volatility of returns. If the correlation between absolute return investments and other asset classes within the fund increases, absolute return investments' expected diversification benefits may be decreased.*

In addition to the normal risks associated with investing, international investments may involve risk of capital loss from differences in generally accepted accounting principles or from economic or political instability in other nations. The Funds are

denominated in one currency but may hold assets which are priced in other currencies. The performance of the Fund may therefore rise and fall as a result of exchange rate fluctuations. Narrowly focused investments and smaller companies typically exhibit higher volatility. The Fund or some of its underlying assets may hold derivatives or borrow to invest. This can make the Fund more volatile and investors should expect above-average price increases or decreases.

While considerable care has been taken to ensure the information contained within this document is accurate and up-to-date, no warranty is given as to the accuracy or completeness of any information and no liability is accepted for any errors or omissions in such information or any action taken on the basis of this information.
